

Father's day gift: computer gadget with free case

Miniature security computer will protect dad when he's connected to the internet and speed up his computer

LONDON, 5 June 2008 – Give the gift of ultimate computer security to your dad and Yoggie Security Systems will give dad a free case.

Yoggie Security Systems™ is offering its range of USB-key sized mini security computers for fathers who want simple yet powerful protection for their computers against internet threats such as viruses, spam and phishing and also make their computers run faster.

The Gatekeeper Pico™ is a USB key-sized Personal Security Computer with 12 security applications. It connects to any PC or laptop - blocking Internet threats outside the host computer and boosting PC and laptop performance by offloading it from installed security software. MSRP: £75.

The Gatekeeper Pico, a sleek, silver USB-key, is in fact a full-blown computer with its own processor, memory and unique operating system. It combines best-of-breed security software with proprietary developments to provide the most comprehensive all-in-one security technology available to consumers today.

The Gatekeeper SOHO™ protects up to five computers with 13 built-in security packages packed inside a small, palm-size, Linux-based security server. This means you will not need to purchase or manage additional security software for your PC's. Just plug the Gatekeeper SOHO into your Internet router, and your computers are completely safe. MSRP: £125

The Firestick Pico™, for road warriors seeking hardware firewall-only protection. The Firestick Pico™ is a portable USB mini-computer that replaces your software Firewall and protects your computer from malicious attacks before they can reach your PC. The Firestick Pico places a physical barrier between PCs and the Internet to ensure that threats never reach users' computers. Unlike software firewalls, the Firestick Pico is based on a dedicated hardware platform specifically designed to protect PCs from the most devastating menaces including denial of service, buffer overflow and the broadest range of malicious attacks. MSRP: £60

For full list of stockists, see <http://www.yoggie.com/retailers> or buy directly from www.yoggie.com

The offer of free case applies until 15 June and is available in the UK only and is only available on the Gatekeeper Pico and Firestick Pico models.

About Yoggie Security Systems

Yoggie Security Systems (www.yoggie.com) established in 2005 by Shlomo Touboul – the inventor of Behaviour Based Blocking Technology – is the developer of the world's first hardware-based computer security solution. Yoggie's range of USB key-sized and ExpressCard-sized security mini-computers connects to any PC or laptop at home, in the office and on the road – blocking Internet threats outside the host computer and boosting computer performance by off-loading installed security software. Yoggie's products combine best of breed security software with propriety patent-pending developments to provide the most comprehensive all-in-one security technology available to both consumers and corporate users.

Yoggie has been recognized by numerous prestigious industry organizations for its unique and innovative security technology. The company continues to expand rapidly through its growing worldwide network of first class distributors, resellers and its own e-store and offers a comprehensive support service including 24/7 telephone support and an online knowledge base.

Yoggie, Yoggie Security Systems, Yoggie Pico, Firestick Pico, Gatekeeper Pico, Gatekeeper Pico Pro and Gatekeeper Card Pro are trademarks of Yoggie Security Systems. All other trade names are the property of their respective owners.
