

## **Yoggie announces General Availability of Gatekeeper Card™ Pro**

The miniature dedicated security computer running **INSIDE** your computer now available to provide ultimate laptop protection and improve laptop performance

LONDON, 14 July 2008 – Yoggie Security Systems™ today announced that the Gatekeeper Card™ Pro, a revolutionary ExpressCard compatible format internet security device that places 13 best-of-breed security applications inside your laptop is now available for purchase [www.yoggie.com](http://www.yoggie.com) or via its retail partners.

The Gatekeeper Card Pro is inserted directly into a laptop's ExpressCard slot, allowing consumers and business users to benefit from unrivalled and transparent security wherever they connect.

The Gatekeeper Card Pro is a full-blown computer with its own processor, memory and hardened operating system. This latest innovation from Yoggie marks the first time that an entire computer has been designed for installation inside another computer – essentially a computer within a computer – for the purpose of providing the most advanced security protection on the market. With new and improved 4X hardware architecture, the Gatekeeper Card Pro offers four times the performance of existing Yoggie devices. Included among the improvements are:

- CPU changed from Intel PXA to Freescale i.MX31
- RAM changed from SDRAM to DDR

The general availability is just in time for the summer season when many holiday makers will be taking their laptops with them. Internet hotspots, in hotels, cafes or airports, are notorious for being insecure. Connecting to the same network shared by multiple users reveals the identity of your computer, exposing it to numerous attacks including spam, phishing, malware, Trojans and worms. Yoggie's range of personal security computers provide powerful plug and play protection for laptop users.

The Yoggie Gatekeeper portable security devices provide 12-13 layers of security software including anti-spam, anti-virus and anti-phishing. All internet traffic is routed through the devices which provide a physical barrier between the laptop and the Internet to ensure that threats never reach the laptop itself. By removing the need to install software, the devices also improve laptop performance.

The Gatekeeper products are in fact a full-blown computer with their own processor, memory and unique operating system. They combine best-of-breed security software with proprietary

technologies to provide the most comprehensive all-in-one internet security solution available to consumers today.

**Gatekeeper Pico™** is a USB stick device. MSRP: £75, available immediately. The Gatekeeper Pico, a sleek, silver USB-key, is in fact a full-blown computer with its own processor, memory and unique operating system. It combines best-of-breed security software with proprietary developments to provide the most comprehensive all-in-one security technology available to consumers today.

In addition to the Gatekeeper range, Yoggie offers the **Firestick Pico™**, for users seeking hardware firewall-only protection. The Firestick Pico™ is a portable USB mini-computer that replaces your software Firewall and protects your computer from malicious attacks before they can reach your PC. Unlike software firewalls, the Firestick Pico is based on a dedicated hardware platform specifically designed to protect PCs from the most devastating menaces including denial of service, buffer overflow and the broadest range of malicious attacks. MSRP: £60

**Gatekeeper Card Pro™** provides the same functionality as the Pico but in ExpressCard format, so is truly 'plug and forget' technology. MSRP: £99, available immediately.

All products are available now from **www.yoggie.com** or via UK e-tailers Amazon, Play.com, Expansys, Maplin and PC World.

For full list of stockists, see <http://www.yoggie.com/retailers>

### **About Yoggie Security Systems**

Yoggie Security Systems established in 2005 by Shlomo Touboul – the inventor of Behaviour Based Blocking Technology – is the developer of the world's first hardware-based computer security solution. Yoggie's range of USB key-sized and ExpressCard-sized security minicomputers connects to any PC or laptop at home, in the office and on the road – blocking Internet threats outside the host computer and boosting computer performance by off-loading installed security software. Yoggie's products combine best of breed security software with propriety patent pending developments to provide the most comprehensive all-in-one security technology available to both consumers and corporate users.

Yoggie has been recognized by numerous prestigious industry organizations for its unique and innovative security technology. The company continues to expand rapidly through its growing worldwide network of first class distributors, resellers and its own e-store and offers a comprehensive support service including 24/7 telephone support and an online knowledge base.

Yoggie, Yoggie Security Systems, Yoggie Pico, Firestick Pico, Gatekeeper Pico, Gatekeeper Pico Pro and Gatekeeper Card Pro are trademarks of Yoggie Security Systems. All other trade names are the property of their respective owners.
