

Yoggie™ miniature internet security appliances reach finals of Computing awards

Yoggie products offload security, increase performance and protect computers wherever they connect

Yoggie Security Systems™ Gatekeeper products have been shortlisted in this year's Computing awards. The new Gatekeeper Card Pro™, Gatekeeper Pico Pro™, Gatekeeper SOHO™ and Yoggie Management Server™ have been shortlisted from hundreds of entries this year in the tough competition.

The appliances are miniature full blown Linux computers holding 13 security components from best of breed vendors such as Kaspersky, SurfControl and Mailshell to Linux applications including Snort. The appliances, in USB and new ExpressCard format, offload a full security suite and can be controlled centrally via the Yoggie Management Server™.

The Gatekeeper Card Pro is the latest innovation from Yoggie and marks the first time that an entire computer has been designed for installation inside another computer – essentially a computer within a computer – for the purpose of providing the most advanced security protection on the market.

With new and improved 4X hardware architecture, the Gatekeeper Card Pro offers four times the performance of existing Yoggie devices. Included among the improvements are:

- CPU changed from Intel PXA to Freescale i.MX31
- RAM changed from SDRAM to DDR

Yoggie Security Systems™ will be competing against other major companies including EMC, Hitachi Data Systems, Texas Memory Systems and Secure Computing.

Shlomo Touboul, CEO of Yoggie Security Systems™, commented: "It's been another outstanding year for Yoggie Security Systems with growth in sales, a strong distribution network of retailers and

resellers and of course the addition of the Gatekeeper Card Pro. This nomination is a tribute to the team which has helped to develop the technologies that's has secured us a place in the finals of this prestigious award".

- END -

About Yoggie Security Systems

Yoggie Security Systems established in 2005 by Shlomo Touboul – the inventor of Behaviour Based Blocking Technology – is the developer of the world's first hardware-based computer security solution. Yoggie's range of USB key-sized and ExpressCard-sized security minicomputers connects to any PC or laptop at home, in the office and on the road – blocking Internet threats outside the host computer and boosting computer performance by off-loading installed security software. Yoggie's products combine best of breed security software with propriety patent pending developments to provide the most comprehensive all-in-one security technology available to both consumers and corporate users.

Yoggie has been recognized by numerous prestigious industry organizations for its unique and innovative security technology. The company continues to expand rapidly through its growing worldwide network of first class distributors, resellers and its own e-store and offers a comprehensive support service including 24/7 telephone support and an online knowledge base.

Yoggie, Yoggie Security Systems, Yoggie Pico, Firestick Pico, Gatekeeper Pico, Gatekeeper Pico Pro and Gatekeeper Card Pro are trademarks of Yoggie Security Systems. All other trade names are the property of their respective owners.
