

fingerPIN presents fingerPIN, MatchLogon with fingerPIN and announces new distributor

24 April 2007, Infosecurity, London, Stand H152, fingerPIN, developer of a unique multisequencing fingerprinting technology:

- Introduces logical access technology MatchLogon with fingerPIN
- Highlights fingerPIN multi-sequencing authentication method
- Announces UK distributor – Sigma Software Distribution

fingerPIN is a cutting edge biometric authentication method that is secure, cost effective and convenient to users. Allowing users to authenticate themselves through a sequence of their fingerprints, fingerPIN is vastly superior to single fingerprint and non biometric access control methods. For a flash demonstration, see www.fingerpin.net/whatisit/inaction.html

fingerPIN is highlighting its Windows® XP Logon product MatchLogon with fingerPIN. Developed for secure network access and logon the technology uses fingerPIN's patented multi-fingerprint sequence technology to provide a single step two factor authentication which completely eliminates the need for passwords and tokens. MatchLogon with fingerPIN v1.5 is a robust security platform offering authentication, authorization, auditing, and administration for the Microsoft Windows Active Directory.

Through fingerPIN the risk of someone fraudulently logging on or accessing a secure directory using a third person's fingerprint data is reduced to 1 in 10 billion due to fingerPIN's unique and powerful matching engine which reduces false acceptances and stores and recalls templates in sequence.

MatchLogon with fingerPIN:

- Allows logon to Microsoft Windows in seconds without usernames, passwords or tokens, by simply entering their fingerPIN sequence
- Registers multiple users and securely stores their biometric data with absolute confidence
- Operates on a standalone workstation, and supports multiple client workstations on a network
- Allows secondary username and password functionality if desired

- Logon can only operate with users' consent, providing irrefutable access

fingerPIN has announced an exclusive distribution agreement with Sigma Software Distribution to sell Matchlogon with fingerPIN throughout the reseller channel within the UK and Ireland. Sigma SD, is a preferred supplier with 280 resellers and a large proportion of the UK market, and will work with value added resellers with a customer base within sectors where data security is key, for instance, legal, defence, finance and banking and professional services companies.

Clive Larkin, Head of Sales, 'We chose to work with fingerPIN because Sigma SD recognised that Matchlogon was an innovative product with a unique solution in a key area. We concentrate on bringing specialist and innovative products to the UK channel and we have no other similar product offering - we see Matchlogon as being complementary to our other security offerings.

'Sigma looks forward to working strategically and proactively with fingerPIN going forward and believes that Matchlogon will provide those customers who value the security of confidential assets with a solution that will meet all of their needs and obligations.'

- END -

About fingerPIN Ltd

fingerPIN Ltd, established in 2006 by Muazam Sarfaraz and Atif Farooq, has developed a multi-sequencing fingerprint technology: fingerPIN. The strong one step two factor technology is available as a fingerPIN Upgrade Toolkit, a software development kit enabling sequencing of biometric templates, plus storage and recall of templates in sequence and Matchlogon with fingerPIN, a PC/Network logon solution. fingerPIN is headquartered in Birmingham, UK, has 12 employees and is privately funded. The company has several patents pending. For more information, please visit www.fingerpin.co.uk

About Sigma Software Distribution

Sigma is a value added software distributor and is part of The Grey Matter Group. We provide innovative, specialist and blanket supply of software solutions for over 1200 publishers and with over 31,000 product lines provide an essential service to our customers. Our customers benefit from excellent operational service, best in the market pricing and look to us to introduce new solutions in line with end user demands and the evolution of technology solutions.
